Objectives:

- The objective of this lab is to introduce students to the basic concepts of Structured Query Language (SQL). No prior knowledge of SQL is assumed. Students will gain a basic understanding of SQL through interactive methods utilizing a free online tutorial and other resources.

Instructions

References, a video, a PowerPoint and some notes are available at my website <https://www.aholdengouveia.name/IntroData/introsql.html>

The tutorial you will be following is here: <https://selectstarsql.com/>
You will be going through all 5 chapters.

Please include answers to the following questions

1. Have you used SQL before? If yes, for what and how much experience do you have with it?
2. After completing the first 4 chapters, what are your opinions on the difficulty?
3. What is one thing you liked about this tutorial? What is one thing you think they could have done better?

4. If you want to attempt chapter 5 you can, did you try it? If yes, why? If no, why not?
5. Take screenshots of each completed exercise that you solve, make sure to have a note with your name and the term in the screenshot, screenshot should be focused on the note and answer, not the full desktop. You can limit your screenshots to questions that started as blank instead of each text box. Any screenshots that don't include the note, or are full desktop, or taken with a camera instead of a screenshot won't count and will earn no points. This is an example of what it should look like:

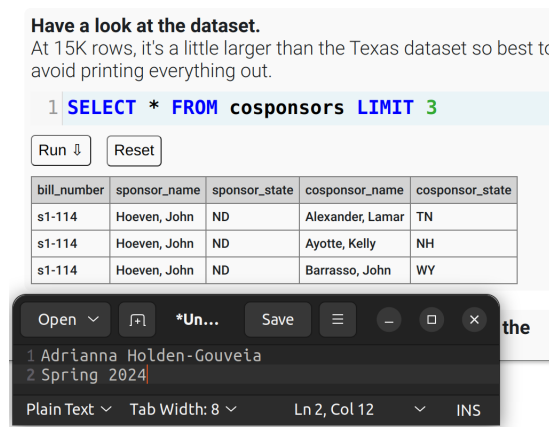

Figure 1: This is an image of what each of your screenshots should look like

Tutorial Recommendation

You should find a tutorial that you would recommend to another person that wanted to learn SQL. The tutorial can be interactive or not. Videos that you can follow along with count as tutorials for this. You should find at least 3 options for tutorials/videos that you also include here. In your recommendation you should explain why you picked the one you did over the other two including pros and cons of each. You may not include any of the links I've shared in your list, they must be new to you materials and tutorials/videos.

Deliverables

- A document containing all requested screenshots
- Answers to the above questions
- Your tutorial Recommendation. Review should be at least a paragraph but no more than two pages.
