

# how to hook up the game thing

(it's fine probably)

---

## stuff in the box

- console
- cords
- controller maybe

[blurred\_photo.jpg]  
looks like this kinda

---

## plug it in

just like, put the hdmi in the hole on the box and also your tv has a hole for it too, so use that. if it doesnt show anything jiggle it a bit

TV BACK  
HDMI???  
[ ] <--- put it here i think

---

## power

find the cord that fits and plug it into the wall. if it doesn't turn on try another wall. the light should do something

---

## controller maybe??

press buttons til it works. sometimes theres a sync button or whatever.

[controller sketch]  
0 0 0 0  
(one of these is sync)

---

## **setup on screen**

there will be menus probably. pick the first option unless you dont want it. internet might pop up just skip it if it's annoying.

---

## **games**

if you have a game put it in the slot. if digital just click around until something downloads. if it asks you to pay maybe dont.

---

## **done**

if something breaks restart it idk.
