

Setting Up Your Game System

This guide will walk you through getting your system connected and ready. Steps may vary slightly depending on your TV or home setup.

What's in the box

- Game system
- Controller
- Power cable
- HDMI cable

(items shown for reference)

Connecting to the TV

Find an HDMI port on your TV and connect the HDMI cable from the console to the TV. Ports may be on the back or the side depending on the model.

TV Ports
HDMI1 HDMI2 HDMI3
^ use one of these

If the TV doesn't show anything, double-check that the TV is set to the HDMI input you used.

Powering On

Connect the power cable from the console to a wall outlet or power strip. Once connected, press the power button on the console. A small indicator light will turn on.

Controller Setup

Your controller should connect automatically. If it doesn't, look for a small button on the controller labeled "Connect" or "Sync" and press it briefly.

(Connect button location varies by model)

On-Screen Setup

Follow the prompts that appear on the TV. You may be asked to choose a language, adjust display settings, or connect to Wi-Fi. These steps usually take only a few minutes.

Installing Games

For physical games, insert the game into the slot on the console. For digital games, navigate to the system's store app and choose a title to download.

Finishing Up

Once everything is connected, you're ready to start playing. If something doesn't seem right, restart the console or check the cable connections.
