

# Setting Up Your Game Console

So here's how you set up your new game system. I've written all the steps as clearly as I could, so even if you're not super techy, you should be fine.

---

## What You Get in the Box

- Game console, looks pretty sleek
- Controller that matches the console
- Power cable and HDMI cable
- Some papers, probably instructions

```
[BoxContents.png] // I drew it so it's easy to see
```

---

## Hooking Up the Console

Take the HDMI cable and plug it into your TV. Use any HDMI port that works. Then connect the other end to the console. Make sure it fits snugly.

```
TV Back Panel  
[HDMI 1] [HDMI 2] [HDMI 3] <-- pick one  
Console HDMI -->
```

After that, plug in the power cable. The console should light up when you press the button on the front.

---

## Controller

Turn on the controller and it should automatically connect. If it doesn't, there's a small button labeled 'Sync'. Press it for a few seconds and it will pair.

```
[ControllerMockup.png] // buttons are labeled in my sketch
```

## **On-Screen Instructions**

The TV will guide you through the setup. Pick your language, connect to Wi-Fi, and maybe sign into an account. Just follow what the screen says. I wrote this so it's super easy to follow.

---

## **Games**

For physical games, insert the disc or cartridge into the slot. For digital games, open the console's app store, search for a game, and download it.

---

## **Ready to Play!**

After everything is connected and set up, you can start playing. If anything goes wrong, just check cables or restart the console. I'm confident this guide will help you get gaming without trouble.
