The HTML version provides enhanced accessibility features including keyboard navigation, screen reader support, responsive design, dark mode support, and high contrast options.

Objectives:

- The objective of this lab is to ... Students will ... These skills are ...

Background

Acme Corp ... You will be working on the two servers you set up in the Server Setup lab: your Red Hat based server and your second server.

Requirements

1. Requirement 1
2. Requirement 2
3. Requirement 3

Acceptance Criteria

- **Everything must be cited.** Every command, statement, and line of code in your scripts and documents must be cited, either with a link to a reference or with a note naming the previous class where you learned it, for example: `# Learned in CIS 117 Intro to Linux`. In scripts, put the citation in a comment next to the code. Anything without a citation will not count.
- Everything is tested on both servers, with screenshots as proof.
- Everything is in your own words.
- Every terminal screenshot shows your prompt with your username and hostname, and either the output of `date` or a note beside the terminal with your name and the term. Hostnames must match your server inventory from the Server Setup lab.
- Your GitHub repository shows your work over time: several commits across more than one day, each with a message describing the change, not a single upload of finished code.

Deliverables

Audience: ... Assume technical knowledge but not expertise. Screenshots are helpful to go with your descriptions.

Make sure your deliverables include documents for BOTH servers, clearly labeled with what the document is and which server it's for.

- Deliverable 1
- Deliverable 2
- Scripts, well commented and tested, with a link to your GitHub where you've uploaded them.
