The HTML version provides enhanced accessibility features including keyboard navigation, screen reader support, responsive design, dark mode support, and high contrast options.

Objectives:

- The goal of this lab assignment is for students to distinguish between good and bad UI/UX using real-world examples. Through practical examples and observations, students will gain an understanding of how to evaluate UI/UX through a checklist of what to look for.
- Students will also find and evaluate a recent real-world example of a bad or unethical use of data.

Resources needed for this lab

References, a video, a PowerPoint and some notes are available at my website

Examples of good UI/UX

- Webby Awards Link: <https://www.webbyawards.com/>
- UX design awards Link: <https://ux-design-awards.com/>

Answer the following questions

Each of the 4 websites above showcases some of the best and the worst of UI/UX. Going through the entries/comments/winners/submissions please answer the following questions using the 10 point checklist and feedback pointers from Link: <https://designlab.com/blog/design-critique-checklist-for-ux-designers#ten> If the point isn't relevant to your question, you may include an explanation of why instead. For example, if you want to critique a physical product, it may not have a navigation or mobile design to give feedback on, and it's ok to explain that.

You should pick 4 specific examples from the above websites. The 4 examples are going to be your favorite, least favorite, most humorous, and which entry should have won. Your favorite and least favorite can come from any of the 4 websites. Your most humorous must come from the bad examples, and the one that should have won must come from one of the 2 award websites (the Webby Awards or the UX Design Awards).

For each example, fill out the 10 point checklist (10ptChecklist.docx, attached to this lab).

1. Your favorite design
 - (a) Name it and include a link and a screenshot of it.
 - (b) Why is it your favorite?
 - (c) Fill out the 10 point checklist for it.
2. Your least favorite or most aggravating design
 - (a) Name it and include a link and a screenshot of it.
 - (b) Why is it your least favorite?
 - (c) Fill out the 10 point checklist for it.
3. The bad example you found most humorous
 - (a) Name it and include a link and a screenshot of it.
 - (b) Why did you find it the most humorous?
 - (c) Fill out the 10 point checklist for it.

4. From one of the 2 award websites (the Webby Awards or the UX Design Awards), a submission that didn't win that you think should have won an award
 - (a) Name it and include a link and a screenshot of it.
 - (b) Why do you think it should have won?
 - (c) Fill out the 10 point checklist for it.

Bad Use of Data Article

Find an article from the past year about a use of data that you consider bad or unethical. The article must be about a specific company or industry, and it must come from a reputable source. Use the CRAAP test to check that it is reputable.

Include:

1. The citation and link for the article
2. A short summary of the article
3. Why you consider this use of data bad or unethical
4. Your CRAAP test results for the article

Deliverables

1. A text document with answers to each of the above questions, making sure to include the 10 point checklist (10ptChecklist.docx) for EACH of the 4 choices you picked from above. You may do 4 documents clearly labelled for which one it is, or one document that contains all 4 clearly labelled.
2. Your Bad Use of Data Article: the citation and link, summary, explanation, and CRAAP test results.
